

SPECIAL ISSUE ON LOGICS OF COMMUNUCATIVE INTERACTION

PREFACE

The *Review of Analytic Philosophy* (RAP) devotes two issues of the journal to the specific topic of ‘Logics of Communicative Interaction.’ Complex forms of changes in the cognitive states of agents and their social relationships can occur in the process of communicative interaction, which calls for a detailed logical analysis. In such an analysis, the triggers of changes and their effects during the process of communicative interaction are of crucial importance. These triggers can include various possible speech acts, whereas an analysis of their effects will typically focus on the formal representations of agents’ doxastic and epistemic attitudes as well as the deontic status of action alternatives available to them. The study of logics of communicative interaction can be approached from different disciplines, including logic, epistemology, argumentation theory, social choice theory, AI, computer science, and philosophy. In this issue, we are happy to announce the following three main contributors to this topic:

- Giorgio Cignarale and Roman Kuznets: “*A priori* Belief Updates as a Method for Agent Self-recovery,” pp. 1–37.
- Réka Markovich and Olivier Roy: “The Right to Know: A Logical Analysis,” pp. 39–75 (invited paper).
- Tomoyuki Yamada: “Uncertainty of Uptake in Speech Acts,” pp. 77–125.

The remaining papers and an introduction to the topics discussed in each of the papers included in the two issues devoted to the logics of communicative interaction will be included in the second issue, which will be published in 2025.
